

Flexible battery

Tracking made easier

Embedded with RFID chips, this flexible battery is used for tracking of goods during logistics. The battery can withstand extreme hot and cold temperature, which enables it to have a wide application in logistics. In China, one of the main applications is in the medical transportation.

Moreover, the battery has a 5-year lifetime and is very thin patch thus allowing it to be used durably and conveniently.

This tracking battery is changing the logistics field by improving real-time tracking and higher durability.
