

Stockholm Study Trip

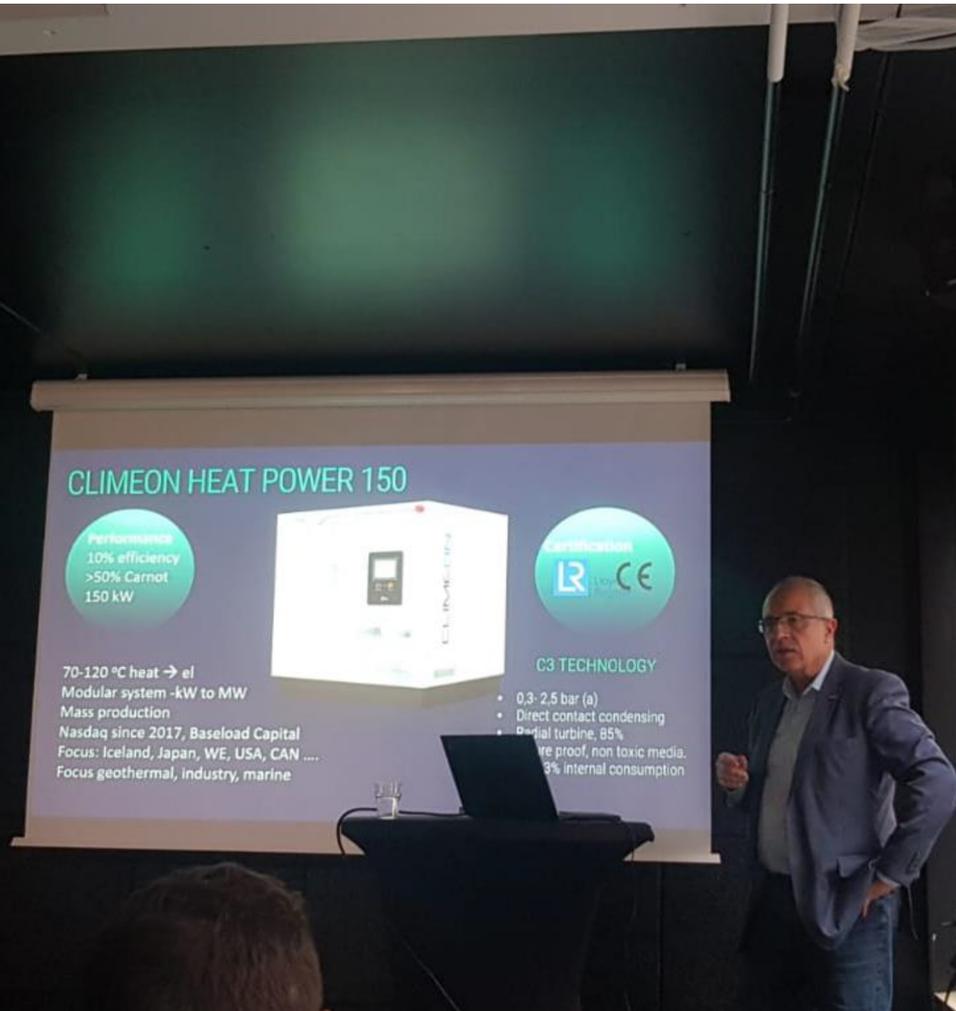

Climeon

Turns heat into clean electricity

Meeting Joachim, the founder of Climeon, was an fabulous experience! He created in 2011 this half-a-billion company, specialised in heat-power technology. During more than one hour, Joachim explained the energy industry (offering many insights and examples) and presented the business model of his company: Climeon partners with industrials, marine and geothermal companies to transform their generated heat into energy. The company made its IPO in 2017 and currently operates in five regions (US, Canada, Northern Europe, Japan and Iceland). This company is very ambitious, willing to become the leader in energy transformation. This global vision attracted several investors, notably Breakthrough Energy Ventures, a VC backed by tech leaders such as Jack Ma and Marc Zuckerberg. This new partnership offers new opportunities and provides Climeon with a wide professional network.

CLIMEON HEAT POWER 150

C3 TECHNOLOGY

- 0,3- 2,5 bar (a)
- Direct contact condensing
- Partial turbine, 85%
- Leak proof, non toxic media.
- 3% internal consumption

70-120 °C heat → el
Modular system -kW to MW
Mass production
Nasdaq since 2017, Baseload Capital
Focus: Iceland, Japan, WE, USA, CAN
Focus geothermal, industry, marine
